## Q-Ber / Homestyle Cutter

Our Carruthers Q-Ber has 1D, 2D and 3D capabilities and is designed to cut fully cooked processed meats and fish, resulting in superior product appearance and uniformity.

By serving as a “guillotine” style portioning machine, our Carruthers Q-Ber chunks product into ¼-inch to 2-inch pieces and is quite efficient, processing up to 2,500 pounds per hour. Sizes and dimensions are not fully squared, but uniform with excellent appearance and minimal tearing or shreds. Non-uniform product appearance is also achievable.

The Carruthers Q-Ber can be easily converted to a Homestyle Cutter by simply changing the shape of the cutting blades.

### How the Q-Ber Works

The product is conveyed under an oscillating knife arm. The arm chops and moves with the belt, then lifts and moves back to repeat the cycle. Chunk sizes can be varied by simply changing the belt drive sprockets.

### Benefits:

- Consistent yields
- Constant product flow to downstream processing equipment via the machine’s continuous feed belt
- Lower maintenance versus machines that utilize an indexing belt motion
- Easily adjustable for a wide range of product applications

### Features:

- Stainless steel construction with food grade plastics
- Processing can be done on a level plane or angled to a 10-degree rise or fall.
- 12” or 16” belt width with standard 36” belt height (other belt height options available)
- Alternate knife positions allow for various portion shapes
- Alternate cutting blades enable “homestyle” cuts
- Produces consistent portions from ¼ to 3 inches
- USDA Approved
- Made in the USA

## Q-Ber / Homestyle Cutter

### Technical Specifications:

<b>Processing Speed</b>	Up to 2,500 lbs. per hour
<b>Product Feed Height</b>	4"
<b>Chunk Size</b>	1/4" x 1/4" up to 2" x 2"
<b>Electrical Requirements</b>	230, 380, or 460V, 3 phase, 50 or 60 Hz.
<b>Machine Dimensions</b>	47 1/2" H x 34 3/4" W x 99 5/8" L
<b>Belt Height</b>	36" (other options available)
<b>Belt Width</b>	12" or 16"
<b>Crated Weight</b>	1,200 lbs.
