

RS Volumetric Portioner

Our RS volumetric portioner is custom designed to volumetrically measure and deliver specific portions into thermoformed packages on a rollstock machine. The portioner first measures, then rotates to deposit product into the package.

Made in the USA, this machine is ideal for any application that requires delivery of two accurate portions, up to 15 pounds per cycle.

Technical Specifications:

Output per cycle	Two portions
Weight consumption	Up to 15 lbs.
Air consumption	Min. 15 cfm @ 100 psig
Pump / stuffer connection	4" Q
Net weight	800 lbs.

Pump/Stuffer Connection
